

I used ChatGPT simply because it's been what I've been using so far this semester and it works fine. The prompt I entered was something along the lines of "Create a clipart of a fork with a transparent background." It then told me it couldn't create one with a transparent background and then asked if it could just draw a clipart fork with a solid background. I told it to proceed and then it made one with a tan background. It was a webp file so I asked it to make it a jpeg instead. The fork is fine, I could find a better—and transparent—one online but it looks enough like a fork. So I guess it's what I expected.
